Career Opportunities: CNA's Predictive Analytics Team

EXPLORE INTERNSHIPS OPPORTUNITIES AT CNA!

As one of the country's largest writers of commercial and specialty insurance, CNA depends on the talent, expertise and enthusiastic engagement of our employees. We provide insurance protection to more than 1 million businesses and professionals in the U.S. and internationally, offering unique expertise for the businesses and industries we serve. Our commitment to diversity and inclusion enables us to serve a broad range of customers while supporting our communities through charitable contributions and employee volunteerism.

CNA's predictive analytics team uses statistical models to understand the risks our customers face. Members of the team work with large data sets to conduct analyses, build multivariate models with various statistical techniques, and collaborate with their business partners in Actuarial, Underwriting, and Claim to provide them with information that helps price products and drive strategic decision making.

Program Description
CNA's predictive analytics summer internship program allows participants to gain 10 to12 weeks of real-world experience by taking part in practical assignments under the mentorship of a manager. Interns are furnished with housing in downtown Chicago and at the conclusion of the internship are considered for full time employment.

In addition to the experience and education acquired on the job, interns have the opportunity to participate in:
- Bi-weekly breakfasts, with senior staff covering various topics related to the insurance industry
- Professional and personal development activities, including training in public speaking and preparation of a presentation
- Specialized training sessions and activities geared especially to actuarial and predictive modeling interns
- Social events that provide great opportunities to meet full time actuaries from all areas of CNA.

Summary of Desired Qualifications
- Pursuing a graduate degree in a quantitative field, such as statistics
- Good understanding of advanced statistical techniques
- Able to program in SAS, R or a similar language
- Effective communication skills, with the ability to summarize model results and make recommendations
- Creative problem-solving abilities
- Curiosity and desire to learn about insurance

To apply
1. Go to www.cna.com/careers
2. Click "Apply Now" on the bottom left side of the page
3. Search for job number ACT0000GU.

About CNA
