BlueCross BlueShield of North Carolina

Clinical Informatics Analyst Associate

Job Description

Job Description

Blue Cross NC is seeking a highly motivated Clinical Informatics Analyst Associate to join the Enterprise Analytics department. You will provide consultative, analytical, and reporting support to customers on various projects. You will conduct ad hoc analysis as directed by management to include the evaluation of operational, clinical, disease management, quality and general business programs and processes with a specific focus on commercial group experience. Under the guidance of management and/or Sr. Informatics Analyst, you will solve business problems through analysis and communicate the outcomes of analysis to customers, business owners and/or Blue Cross NC management.

Under direct supervision:
• Perform all aspects of data analysis and evaluation, to include:

- data acquisition and data management,

- basic SAS, SQL, Business Objects, and Crystal programming,

- quantitative and qualitative data analysis,

- interpretation and synthesis of outcomes and conclusions,

- prepare documentation and communication of results to inform recommendations for

  business owners and management.

• Provide analytical support and ad hoc analysis including design and database queries to extract necessary data and compile into an appropriate report format to effectively communicate results to business owners and management.
• Use business knowledge to determine project requirements, resolve business issues and identify changes or barriers to success.
• In order to effectively support customer base, incumbent will learn and understand how disease management and care management programs are administered at BCBSNC. Incumbent will learn and understand the basics of the Sales account management process.

Hiring Requirements

- Bachelor's degree and 1 year of data management experience and analyzing large data sets

  in a business environment.

- If no degree, 3 years of data management experience and analyzing large data sets in a

  business environment.

Hiring Preferences

- Bachelor's degree in biostatistics, epidemiology, quantitative social science, computer

  science, math, statistics, or finance

- Experience in the health care industry.

- Evidence of research, and analytical, problem solving skills

- Programming

- in SAS (Base and Stat) / SQL Query Construction).

- Effective verbal and written communication and presentation skills
